Additional Skype for Business Plug-In for Flex Communications Integrates the MX System with the Skype for Business Application

The popularity of the Skype for Business in the corporate world, means that when it comes to integrating the new phone system in the office, many workers are reticent to give up the tools they are familiar with and end up using more than one program for interoffice communication, resulting in loss of employee cohesiveness for the business. Zultys has created a Skype for Business Integration plug in for the Flex Communicator specifically to solve this problem. With the integration between the two programs, employees using Skype for Business can still see company-wide Presence, and are thus able to see when colleagues are on the phone or otherwise unavailable.

Flex Communicator provides integration with Microsoft Skype for Business/Lync 2013 clients. The integration also provides the ability to place an outbound call via the MX system directly from within the Skype for Business client interface, eliminating the need to switch between multiple applications.

FEATURES:

- Exchange Presence information between Zultys' MXIE unified communication client and Skype for Business Client
- Initiate calls via the MX phone system from Skype for Business client for smoother integration

REQUIREMENTS:

- Lync 2013/Skype for Business client are installed and properly configured on the client PC. The Skype for Business Server can be a local server onsite or the Office 365 cloud based solution.
- Flex Communicator 3.0.6 and the Zultys Lync plug-in must be installed on the client PC.
