- Pick the best package that fits your business
- Up to 50% savings on local, long distance and toll-free service
- Use your Internet connection for your phones
- Make free inter-office calls

SIP Trunking

Meeting the Network Demands of the Fortune 50 for over 20 Years

For over 20 years, Intermedia has been meeting the exacting communications quality standards of Fortune 50 companies like IBM, Hewlett Packard, Standard Register, American Express, Sun/Oracle, and Internap.

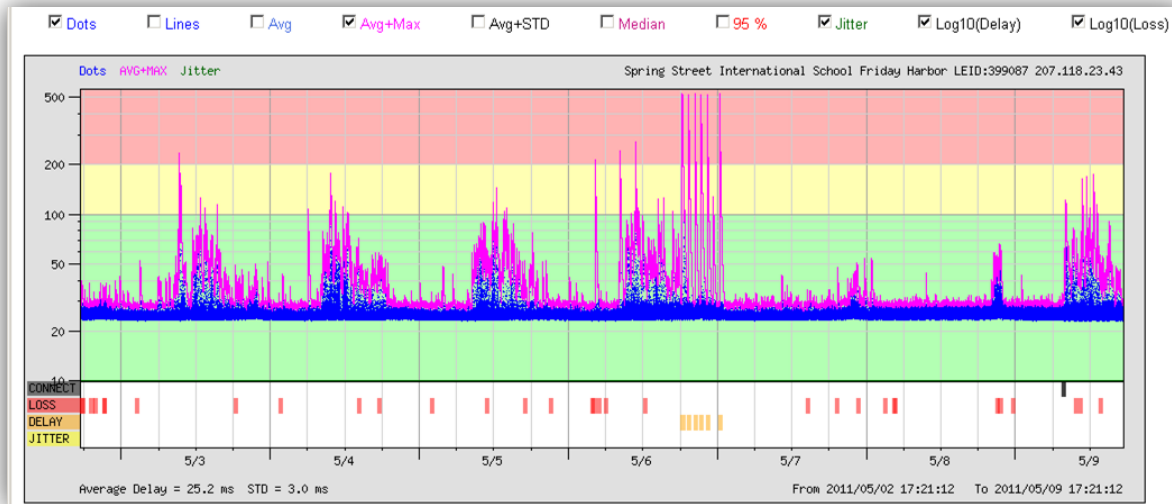

Now, in conjunction with select IP PBX manufactures, Intermedia offers this proven network performance to you.

VoIP Test

Reliability Starts Before the Install

The ONLY SIP Trunking provider where QoS (Quality of Service) starts before the install!

- ✓ All potential customers are required to run and PASS a multi-day VoIP Bandwidth Analytics Test to validate their network can successfully run quality VoIP traffic
- ✓ The VoIP Test produces a complete “picture” of the network over a meaningful period of time so issues can be avoided BEFORE they become problems

Support

Three Principals of Rapid Issue Resolution

US Based Support: Trained specialists located in Bellevue, WA

Enhanced Tools: Intermedia's SmartWatcher tool allows us to view your network for quick trouble resolution

Rapid Escalation: Intermedia support personnel has direct communication paths to each of our PBX partners technical support centers to avoid “finger pointing” and resolve issues quickly

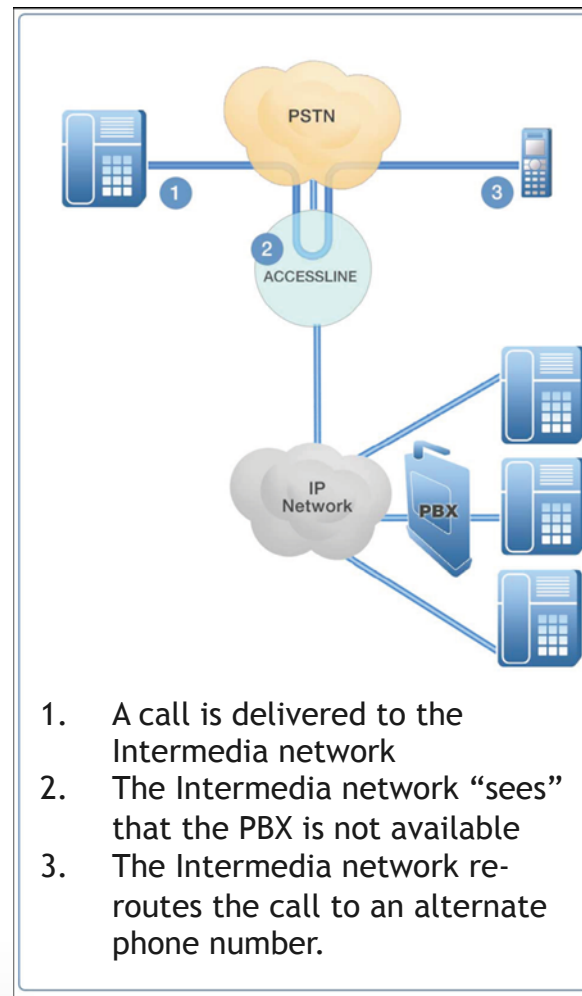

Failover Routing

Protect Yourself from IP Network, PBX or Inbound Trunks Failure

Fail Over Routing provides advanced, instant redundancy by automatically redirecting inbound calls to an alternate phone number in the event the primary termination location is unavailable.

- Intermedia's network constantly monitors all customer locations for service availability. When a customer's end point is detected to be out of service, the Fail Over routing takes effect
- Intermedia continues to monitor the customers primary service location's condition. Once the service is restored, Intermedia instantly restores the primary defined routing

One fail over number per customer location is mandatory. However, each DID can be routed to a unique 10 digit number.

Optional Enhanced Features

- ✓ **Voicemail:** Local or toll free number with built-in voicemail for unanswered calls. Ideal if company doesn't yet have voicemail or wants to replace their voicemail
- ✓ **Follow-Me with Voicemail:** Local or toll free number with call forwarding, call screening, sequential ringing and simultaneous ringing. Ideal for mobile sales, support or executives. Ensures they never miss important calls.
- ✓ **Conferencing:** Toll free reserved and reservation less conferencing number. Low cost conferencing service with the capability for an office worker to join "on-net" for even more savings.
- ✓ **WebFax:** Local or toll free number for receiving and storing faxes. Used to provide "fax mailboxes" for secure confidential fax receiving and sending from a PC.
- ✓ **Automated Attendant:** Local or toll free number for answering and routing inbound calls to the right person, department or information. Ideal for consolidating multiple offices, for specific departments, after hours or for each location. Requires phone system has DID to route calls to specific phones.

Remote Market Numbers

Establish a Local Presence in Any Remote Market

Purchase Remote Market Numbers (sometimes referred to as "Foreign Exchange" numbers) in locations other than where you are physically located

- Get a local presence in a market that might be across the city, state... or nation
- Establish a local presence without the costs of branch office set up, commuting or staffing
