

Vertical MBX IP

One system. Countless possibilities.

Vertical MBX IP is more than just a phone system. It's a feature rich, converged unified communications solution that delivers both digital and VoIP capability for up to 324 physical and 324 virtual users and 250 multiple sites in a single, cost-effective package. With the MBX IP, you can deploy and start taking immediate advantage of the cost-savings and business benefits of VoIP, or migrate at your own pace. The system can be used with T1/PRI, analog, and/or SIP trunks, and, with a maximum capacity of 414 ports, supports traditional analog and digital endpoints, Vertical IP endpoints, SIP phones, and/or softphones.

MBX IP provides the same benefits and competitive advantages as far more expensive and complex enterprise-class phone systems. It also includes the only standard Hotel/Motel telephony feature suite available in a single system at no extra cost.
