## Join the streaming business music revolution

Meet the new EOSP-500, the revolutionary dual zone streaming media player that will change the face of commercial business music installations forever.

The new EOSP-500 Dual Zone Streaming Music Player is simple to install and easy to use...just connect to any internet router. The player comes bundled with the new Cloudstream Business Music service that gives the user access to over 50 channels of fully licensed music, by all the top artists, in virtually every possible music genre imaginable (\$29.95 per month subscription). The player is also configurable to accept streaming stations from other streaming music providers upon request.

### Features, features, features!!!

10 station presets make it easy for customers to store and recall all their favorite stations...IR remote allows stations to be changed wirelessly. Built in monitor speaker allows user to listen to streams from radio or USB/Aux input locally. Master volume control allows global change of wireless speakers and receivers. An SD Card slot allows the user or the dealer to load MP3 files onto a card for playback in event the internet goes down. Users and dealers can use a USB Flash drive to deliver music-on-hold or other music programming over Zone 2 of the player.

### Wireless freedom!

With the optional slide-in wireless transmitter card dealers can eliminate costly installation and cabling traditionally associated with commercial business music systems. When used with Eos wireless speakers and receivers, a complete installation can be done by the user in a matter of minutes, opening up a world of customers that were previously unserved by the traditional music service market.
